

How to Measure

How to measure for Solar Heating

When measuring a roof, it's very important to state the "Actual Roof Measurements" on your order, rather than the solar collector measurements. That way, we can make the solar system to suit the roof shape.

Measurements Required:

Metal Roof:

- A: Top of Roof Length
 - B: Bottom of Roof length
 - C: Manifold Side Length (Angled or Straight)
 - D: Top to Bottom of Roof
- * Please take measurements internal of capping, flashing & ridges

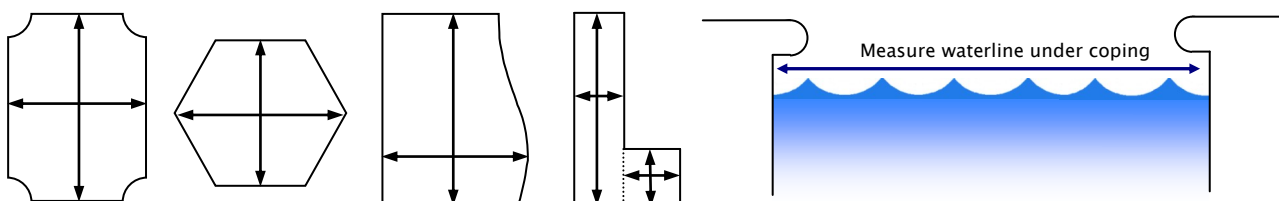

Tiled Roof:

- The measurements above are required for a tiled roof along with the following 2 additions:
- A: The Exposed Tile Length from top to bottom (See Left)
 - B: Number of tiles from top to bottom
- * Orders cannot be processed without a tile length

- When measuring all roofs, you **must** take down the above measurements.
- With systems that have more than one section, these measurements must be taken for each section, i.e Section A and B.
- Only roof measurements will be accepted on our forms, so please make sure you **do not** make any allowance in your measuring for the header pipes. We will do that for you.
- Please indicate in the diagram section where the solar is to be located, i.e "keep high on roof"

How to measure for a Pool Cover

- No matter what the shape of the pool, measure as if a rectangle, i.e **Widest & Longest points**.
- Always take the waterline measurement under the coping tile.

Ordering tips

- Measure the roof/pool, ensuring you get all the required measurements listed above.
- Fill in as many details as possible on a Sunbather Order Form (pages 16–19) or your letter head paper.
- **Fax or email** your orders to your nearest Sunbather Office –

VIC: fax 03 5979 3577 or email info@sunbather.com.au

NSW: fax 02 9894 6634 or email nsw@sunbather.com.au

QLD: fax 07 3806 1398 or email qld@sunbather.com.au

Victoria:

Head Office and Factory
2174 Frankston–Flinders Road
PO Box 107 Hastings VIC 3915
